Oak Lesson 4: What landforms do rivers create?

Match the photograph to the process.

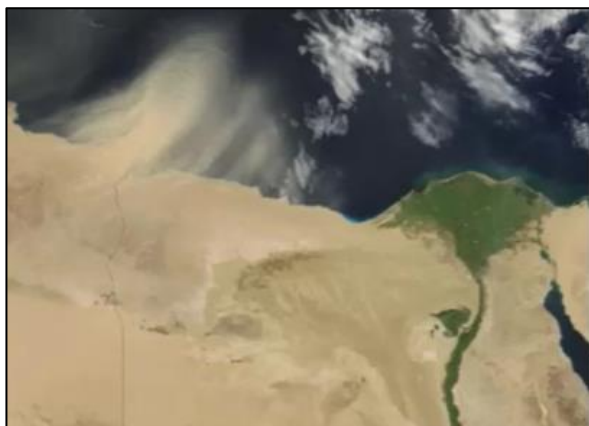

- a) Oceans creating landforms.
- b) Movement of tectonic plates.
- c) Wind creating landforms.
- d) Glaciers creating landforms.

By which process has the Horseshoe Bend in the Grand Canyon been created?

By which process has the Nile Delta been created? Circle it on the photograph.

How do you think V-shaped valleys are formed?

Complete the sentences.

In the part of the river closest to the source, the river does a lot of erosion (downwards erosion), cutting into the rock. This the river channel.

In the middle and lower course of the river (..... away from the source, closer to the mouth), the river does more (sideways) erosion, which makes the river channel

lateral deepens wider further vertical

What are interlocking spurs? (use these words to help explain: rocks, stick out, river, erode, hard, easily).
